Pandemic Iberia

Introduction: Players take the role of 19th Century philanthropists working co-operatively to research diseases that are devastating the population of the Iberian Peninsula.

Game End and Goal: The players win together if they research all 4 diseases. The players lose together if: 8 Outbreaks occur, not enough disease cubes are left in supply when needed, or the draw deck runs out.

Setup:

1. Place the **Game Board** within easy reach of all players. Put the **4 Hospitals** (4 houses, **R**/**Y**/**Blu**/**Blk**), **20 Railroad Tokens** (rail chits), and **14 Purification Tokens** (water drops) nearby. Separate the **96 Disease Cubes** by colour into 4 supply piles of 24 cubes.
2. Place the **Outbreaks Marker** (white w. red compass) on the "0" space of the Outbreaks Track. Place the **4 Research Markers** (microscopes) near the Researched Disease Indicators.
3. Place the **Infection Rate Marker** (black/red bacterium) on the left-most "2" space of the Infection Rate Track.
4. Shuffle the **48 Infection cards** (bacteria tile backs)**:**
    a. **Reveal 3** of them. Put **3 disease cubes** of the matching colour on **each of these cities**.
    b. **Reveal 3** more cards: put **2 disease cubes** on each of these cities.
    c. **Reveal 3** more cards: put **1 disease cube** on each of these cities. (You will place a total of 18 disease cubes, each matching the colour of the city).

    Place these 9 cards face up on the **Infection Discard Pile**. The other Infection cards form the **Infection Deck**.
5. Give each player a **Reference Card**. *Return the spares to the box.*
6. Shuffle the **7 Role Cards** and deal 1 face up in front of each player along with the matching pawn. *Remove the remaining Role cards and pawns from the game. Each player should make their role's abilities known to the table.*
7. Take the **69 Player Cards** (orange tile bk), separate them into 48 City Cards, 15 Event Cards and 6 Epidemic Cards.
8. Shuffle the 15 **Event cards** and draw without revealing the number of Event cards shown in the table below:

# of players	Events in deck	Starting Hand Cards
2P	4	4
3P	5	3
4P	6	2
5P	8	2

    Add these **Event Cards** to the 48 City cards. *Return the remaining Event cards to the box without revealing*.
9. Shuffle the City and Event cards together. Deal cards to the players to form their **Starting Hands** (according to the table above, for the number of players present).
10. Each player looks at the City cards in their hand and selects one of the cities pictured on their cards to place their pawn. If a player doesn't have a City card (for example if **all of their cards are Event cards**), they may start their pawn in **any city on the board**. Players keep their cards **face up on the table**.
11. Set the game's difficulty level, by taking either 4, 5, or 6 Epidemic cards, for an Introductory, Standard, or Heroic game, respectively. *Remove any unused Epidemic cards from the game.*
12. **Divide the remaining Player cards into face-down piles**, as equal in size as you can, so that the number of piles matches the number of Epidemic cards you are using. **Shuffle 1 Epidemic card into each pile**, face down. **Stack these piles face-down one on top of another to form the Player Deck**, placing smaller piles on the bottom. Place the Player Deck on its spot on the board (towards bottom R).
13. The players look at the City cards they have in their hand. The player who has the **City card with the earliest founding date** goes first.

Course of Play: Beginning with the First Player and proceeding clockwise, players take turns until the group either win (research four diseases), or lose (8 Outbreaks, no disease cubes when needed, no cards left to draw). On their turn, a player does the following 3 steps in order:

1. Do 4 actions.
2. Draw 2 Player cards.
3. Infect cities

Players should freely give each other advice. However, the player whose turn it is decides what to do. Your hand can hold City and Event cards. City cards are used in some actions and **Event cards can be played at any time** (including on other players' turns if they agree).

Do 4 Actions: You may do up to 4 actions each turn. Select any combination of the actions listed below. You may do the same action several times, each time counting as 1 action. **Your role's special abilities may change how an action is done**. Some actions involve discarding a card from your hand; all these discards go to the Player Discard Pile.

- **Movement Actions:**
  - **Move by carriage** – Move to a city directly connected by a brown line to the city you are currently in (line may be solid or dashed). *You do not need to discard a card.*
  - **Move by train** – Move to a city connected by a **continuous chain of railroad tokens** to the city you are in. *You do not need to discard a card.*
  - **Move by ship** – Move from a port city you are currently in, to any other port city by **discarding a City Card matching the colour of your destination**.
- Other Actions:
  - **Build a Railroad** – Place a railroad token taken from supply on a **solid** (not dashed) line connecting to your current city.
    - There must be a Railroad token in supply to do this.
    - You do not need to discard a card to do this.
    - You cannot place railroads on dashed lines, e.g. connecting to Andorra, Palma or Gibraltar.
    - From now on, all players may use the Railroad to move by train.
  - **Build a Hospital** – Discard the City Card that matches you current city to build a hospital there. The colour of the hospital token you place must match the colour of your city. If a hospital of the correct colour is not available in supply, move it from its current locations to your current location.
  - **Treat Disease** – Remove 1 disease cube from your current city, returning it to supply.
    - *Unlike normal Pandemic, you only remove 1 disease cube even if that disease has been researched.*
  - **Share Knowledge -** You can either:
    - Give the City card that matches the city you are in, to another player in the **same city**
    - Take the city card that matches the city you are in from another player in the **same city**
    - In both cases, the other player must agree to this.
    - If the player receiving the card has in excess of 7 Cards, they must discard cards (or play an event) to reduce their hand size to 7.
  - **Research a disease** – While at a city with a hospital, discard 5 city cards **matching the colour of the hospital in that city** from hand to research that disease of the hospital's colour. Cover that disease with its corresponding microscope marker on the board.
    - Cubes of the researched disease remain on the board. And new cubes will be placed during Epidemics and Infections, as normal.
    - During future 'Treat Disease' actions, one cube of the researched disease per action (as normal)
    - **However**, a new method of performing 'Purity Water' becomes available (see Way 2 below).
    - Researching a disease places you ¼ of the way closer to winning the game.
  - **Purify Water:** Purify water can be performed in 1 of 2 ways:
    - Way 1: Select a Region **adjacent to your current city**. Select a City Colour that matches the colour of one of the cities that borders **that region** (it doesn't *have* to be the colour of the city you are in, it could be another city colour bordering that region). Discard a City card matching that **colour.** Place **2 Purify Water tokens** in **that region**.
    - Way 2: Discard a City card matching the **colour** of a **researched disease** to put 2 Purify Water tokens in **any one adjacent** region to your city.
      - **A region is a board area surrounded by a ring of continuously connected cities (connected via solid or dashed lines including railroads).**
      - **A region is considered adjacent to you if your pawn is in a city that forms any corner of the line boundary of the region.**
      - **The cities themselves cannot have Purify Tokens placed on them.**
      - In Way 2: The colour of the researched disease does not have to match the colour of any city bordering the region you want to place into. The region just needs to be adjacent.
      - If there are no Purity Water tokens remaining in supply, this action cannot be done.

Draw Cards: Draw the top 2 cards from the Player Deck together.

- Before you draw, if there are fewer than 2 cards remaining in the Player Deck, the game ends, and you have lost!

Examine the cards you just drew. If they are City or Event Cards, they can simply be added to your hand. You do not have to discard to hand limit until the Epidemic(s) have been resolved (if any). *If you draw one or two Epidemics, you do not get to draw hand cards to replace those Epidemics once resolved (bad luck!).*

Epidemics: If one or both cards are **Epidemics**, immediately do the following steps in order. To resolve an epidemic card, do the following steps in order:

1. **Increase the Infection Rate:** Move the infection rate marker forward one space on its track.

2. **Infect a City:** Draw the **bottom** card from the Infection Deck. Put **3 disease cubes** matching that City's colour on the city.
    a. If the city already has at least one cube if that colour on it, add cubes until it reaches 3 cubes, then resolve an **Outbreak** before proceeding (see below). *Return any remaining of these three cubes to supply.* Then, proceed to Intensify. **Each Purify Water token on any region bordering the city being infected is used to prevent 1 disease cube from being placed**. You cannot choose to not use the purify token if triggered. However, if you have two adjacent regions with purify water tokens, you may choose which region(s) use their token(s).
3. **Intensify:** Reshuffle the **Infection Deck discard pile only**. Place these cards back **on top** of the existing Infection Deck.

Repeat this step once more if you have a second Epidemic Card. Either way, after the Epidemic(s) are resolved, remove the Epidemic Cards resolved from the game.

Hand Limit: If a player ever has more than 7 cards in their hand (after resolving Epidemics) discard cards or resolve events until you have 7.

Infections: Flip over cards from the **top** of the Infection Deck **equal to the current infection rate**. Flip the cards one at a time, resolving one before flipping the next. To infect a city:

- Place 1 disease cube matching the city's colour in that city.
    - If there is a Purify Water token present in a region adjacent to that city, you must instead return the cube to supply. Remove a Purify Water token from an adjacent region of your choice, and return it to supply.
    - If the city already has 3 cubes of this colour on it, instead return the cube to supply and **resolve an Outbreak** (see Outbreaks, below).
- Discard the infection card, and proceed to the next.

Outbreaks: When an Outbreak occurs (there are three cubes of one colour on a city, and a game effect calls for a 4th cube of the same colour to be added), advance the Outbreaks token 1 space. Then, place 1 disease cube of the affected colour on every city connected to that city (or remove a Purify Water token per city, if available in a region adjacent to it). If any of these cubes would be a 4th cube of that disease's colour in a connected city, again, do not place the cube, but resolve a **Chain Reaction Outbreak** in each affected city after the current Outbreak is resolved.

- **Chain Reaction Outbreak** – The only difference between a Chain Reaction Outbreak and an Outbreak is that when adding cubes to adjacent cities, do not add a cube to any city that **already had an Outbreak** this turn.

Outbreaks may result in cities having disease cubes with multiple colours on them. They may have up to 3 cubes of **each disease colour** on them without triggering a further Outbreak.

If the Outbreaks marker reaches the last space of the Outbreaks track, the game ends, and the team have lost!

If at any time during Infections or Outbreaks there are no disease cubes left of a colour when at least one needs to be placed, the game ends, and the team have lost!

Turn End: After infecting cities, and discarding infection cards, you turn is over. The next player in clockwise order takes their turn.

Event Cards: During a turn, ANY player (not just the active player) may play event cards. Playing an event card is not an action. They player who plays the event card decides how it is resolved. An event card can be played at any time **EXCEPT between drawing and resolving an Infection or Epidemic Card**. *If two Epidemics occur sequentially, Events may be played in between resolving the first and second Epidemics.* After resolving an Event card, discard it to the player card discard pile.

Player Cards: Each player places their cards face up on the table in front of them, for all players to see. Only PLAYER cards count towards your hand limit (not your role or reference card).

Discard Piles: Players may freely examine the infection or the player card discard pile at any time.

Game End and Winning/Losing:

The game ends immediately and the players win if they have researched all 4 diseases.

The game ends immediately and the players lose if:

- The outbreaks marker reaches the final space of the Outbreaks Track.
- You are unable to place the number of disease cubes of the correct colour needed on the board
- A player cannot draw 2 player cards during the Draw Cards step.

Challenges: Note the Influx of Patients and the Historical Diseases challenges in the game manual.

Events Glossary:

Event	Effect
Good Season	During the next infection step, draw only 1 infection card, and draw it from the bottom of the infection deck.
Government Mobilisation	Each player may immediately move their pawn once for free, using the means of their choice, carriage, train or ship.
Hospital Founding	Place or move a hospital into a city matching its colour
Mail Correspondence	Two players (anywhere on the board) can swap 1 card from their hands
New Rails	Add 2 railroad tokens anywhere on the board (not possible on dashed lines)
One More Day	The current player may take 2 more actions this turn
Overseas Migration	Remove up to 2 cubes from the board
Purify Water	Put up to 2 purification tokens onto the board placed into one or two different regions
Ring Railroads	Add 3 railroad tokens between port cities (not possible on dashed lines)
Science Triumph	Remove up to 1 cube from each city in one region
Second Chance	Take the City card matching your current city from the player discard pile
Ships arrive	Select a port city. Move 1 or more player pawns there from anywhere on the board (with permission from the other player).
Telegraph Message	One player may give 1 or 2 City Cards to one other player anywhere on the board
Travel Day and Night	Move a pawn to any city on the board (with permission)
When the plans were good	Take 1 Event card from the player discard pile and play it immediately

Roles Glossary:

Role	Ability
Agronomist	• Spend an action to place a purification token into an adjacent region. • When doing the Purify Water action, you may place 1 additional purification token into the region.
Politician	• Spend an action to give a City card to another player in any City. You must be in the city matching the card that is passed. • Spend an action to swap a City card in your hand with a City card in the discard pile. You must be in a city matching one of the cards that is swapped
Nurse	• Your role comes with a prevention token. Put your prevention token into a region adjacent to your city during setup. Cities adjacent to your prevention token cannot be infected. • Your prevention token always travels with you. Whenever you (or anyone else) moves your pawn for any reason, immediately put your prevention token into a region adjacent to your pawn
Railwayman	• Once per turn, when you do the Build Railroad action, you may place two consecutive railroad tokens starting from your current city. • When you Move by Train, you make take one passenger (a pawn in your city) with you
Royal Academy Scientist	• When you do the Purify Water action, you may play any City card, regardless of colour. • Spend an action to pick up the next 3 Player cards. Rearrange them as you like, then place them back on top of the Player Deck
Rural Doctor	• When you do the Treat Disease action, remove one cube from your city, and one additional cube from your city or from a different city in an adjacent region
Sailor	• When you Move by Ship, do not spend a card. • When you Move by Ship you may take one passenger (a pawn in your city) with you.
